

Think Clean, Think Safe, Think Saeplast® PE

“They (Saeplast) stood out as #1 in durability and stack ability. The PE875 and lid made the perfect fit. The (Saeplast) totes have performed beyond our expectation.”
Pepsi Beverages Company

PE refers to the polyethylene construction of the outer walls that are bonded to the PE core of the container. The PE plastic is triple-layered, making this the strongest tub in the market. The Closed Cell Core design does not absorb liquid, optimizing hygiene and the safety of your products.

The robust triple-wall design yields longer durability and reduces long term costs. The ergonomically designed one-piece construction facilitates easy cleaning and sanitation. The SÆPLAST PE tubs are designed to meet the toughest demands of any environment.

Saeplast PE...Tough!

Why worry about running out of floor space when you can stack the Saeplast PE containers and avoid the madness of overcrowding on the plant floor?

Get rid of cardboard, wood, plastic poly bags, plastic poly caps and inferior designed single wall plastic containers and move to the rugged one-piece triple wall Saeplast PE Containers.

What Will Saeplast PE Bins Replace?

Stainless Steel: Heavy, loud, costly, difficult to repair, unsafe for workers.

Plastic Single Wall: Fragile, easily broken, difficult to sanitize, unsafe for workers.

Corrugated Cardboard: 1–3 uses only, high assembly cost, easily damaged, unsafe for workers.

All of these products can, and will, harbor harmful bacterial growth and they are very unsafe for employees due to splintering, metal tearing, and boxes collapsing. As a result, these options are not the best food safety option for your protein handling needs

1050 PE

Dimensions	External		Internal	
	inches	cm	inches	cm
Length	48	120	45	114
