

Protein Recovery System

Saeplast plastic containers

The poultry industry's on-going problems of dealing with mortalities have been solved by the cleverly designed Saeplast Protein Recovery System. As mortalities are collected, they are placed in this freezer unit, which sits outside the growing house, until they are ready for protein recovery. A result of Saeplast's extensive, on-going consultations with the poultry industry, the PRS fully addresses all environmental concerns and thoroughly complies with the most stringent environmental regulations.

D600

Volume (box only): 1700 L / 60 pi³
